

The British Science Association has invited our school to participate in the National Science and Engineering Week in March (14th to 23rd March). There is more info on National Science and Engineering Week here - <http://www.britishscienceassociation.org/national-science-engineering-week>.

This is a great opportunity for our school because it will enable the children to engage with Science in an exciting or creative way. Since we are a Greek school we decided that the focus of the activities will be on the Greek scientists (scientist/ mathematician/ engineer/ philosopher). To give you an example of an activity, clay will be used in order to model the faces of Greek scientists.

In short, our school will carry out activities on Saturday, the 15th of March. All children will participate and a creative practitioner will guide us and work with us the whole day. All expenses are covered by a grant given to our school hence the event will be free of charge for everyone.

This will be a great event which the children will enjoy tremendously. You are all invited to get involved in this. We will have an exhibition of the children's creations at 15:00 and your presence at that time is very important. You will have the opportunity to see the final products of the children and perhaps make some more with them (we'll have time until 15:30 for activities that will involve you as well). Also, we will offer snacks and refreshments.

It is an opportunity for all of us to meet, create and learn with our children! We look forward to your positive replies in this event as well as to your participation from 15:00 onwards.
